The chart displays the monthly change in the number of employees in the manufacturing sector. The x-axis represents time from April 2025 to January 2026, with labels every two weeks. The y-axis represents the change in the number of employees, ranging from -100 to 100. The data is shown as a blue line with vertical error bars. The chart shows a significant increase in employment starting in late 2025, peaking in early 2026, and then declining.

The chart displays the daily count of COVID-19 cases in the Czech Republic. The y-axis represents the number of cases, ranging from 0 to 140,000 in increments of 20,000. The x-axis shows dates from April 14, 2020, to October 11, 2020. The data is represented by a blue line with markers for each day. The chart shows a period of low case counts until mid-July, followed by a sharp increase. A notable peak occurs in late August and early September, where cases reach approximately 100,000. Following this peak, there is a slight decline and then a continued upward trend, reaching over 120,000 cases by mid-October.

The chart displays the monthly change in the number of people in the labor force. The x-axis represents time from April 2020 to October 2023, with labels every two months. The y-axis represents the change in the number of people, ranging from -100,000 to 100,000. The data is shown as a line with markers, where blue bars indicate a decrease and orange bars indicate an increase. The overall trend is positive, with a notable increase in late 2022 and a slight dip in early 2023.

The chart displays the daily closing price of the Dow Jones Industrial Average. The x-axis represents time from April 14, 2020, to October 1, 2020, with labels every two days. The y-axis represents the price index, ranging from 20,000 to 30,000 in increments of 1,000. The price starts around 24,000, drops sharply to a low of approximately 20,000 in early April, then recovers to around 24,000 by mid-April. It then shows a period of relative stability with minor fluctuations until late July, when it begins a steady climb. There are several small dips and recoveries during this ascent, with notable ones around August 10 and August 20. The price reaches a peak of nearly 30,000 in late September, followed by a sharp drop to around 28,000 on September 24, and then a recovery to over 30,000 by October 1.

The chart displays the monthly change in the number of people in the labor force from January 2020 to January 2026. The y-axis represents the change in the number of people, ranging from -100,000 to 100,000. The x-axis shows the dates from 14.04.2020 to 01.10.2025. The data is presented as a line chart with blue bars for positive changes and red bars for negative changes. The chart shows a significant decline in the labor force starting in early 2020, reaching a low point around mid-2020, followed by a gradual recovery and stabilization through 2021 and 2022. The labor force then shows a slight upward trend through 2023 and 2024, before declining again in early 2025.

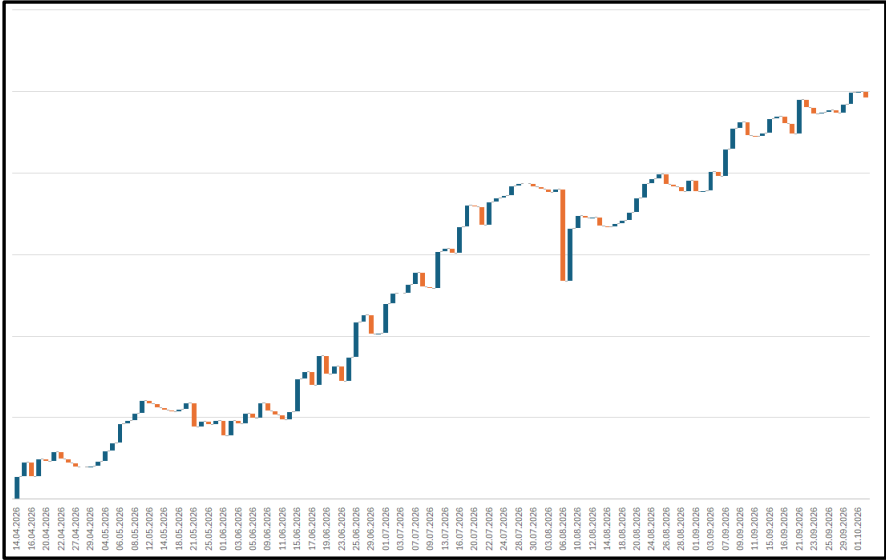

The chart displays the progression of COVID-19 cases in the Val de Saône region. The orange line represents the total number of cases, which rises sharply in mid-April to over 10,000 and then gradually declines to around 5,000 by late April. The blue line represents daily new cases, which peaks in mid-April at approximately 1,500 and then declines to near zero by late April. Both series show a period of relative stability with minor fluctuations from late April through September, followed by a slight increase in late September and early October.

Date	Cumulative cases (orange)	Daily cases (blue)
14.04.2020	~1,000	~100
