The chart displays the monthly evolution of the number of deaths in the Canary Islands. The x-axis represents time from April 2020 to October 2021, with labels every two weeks. The y-axis represents the number of deaths, ranging from 0 to 100 in increments of 20. The data is presented as a line chart with blue bars for positive changes and orange bars for negative changes. A significant peak is observed in late 2020, reaching nearly 100 deaths per month. Another smaller peak occurs in late 2021, reaching approximately 40 deaths per month. The chart also shows periods of low mortality, particularly in early 2020 and early 2021.

The chart displays the progression of COVID-19 cases in the Val de Aude region. The orange line represents the cumulative total of cases, which shows a consistent upward trend over the period. The blue line represents the daily number of new cases, which exhibits high volatility, including a significant peak in early April and another smaller peak in late September. The overall trend indicates a sustained period of transmission with periodic surges in daily case counts.

The chart displays the daily price movement of the S&P 500 index from March 2020 to October 2023. The y-axis represents the price in US dollars, ranging from \$2,000 to \$4,000. The x-axis shows dates from 26.03.2020 to 14.10.2023. The price starts around \$2,800 in March 2020, peaks near \$3,800 in May 2020, then drops sharply to a low of approximately \$2,200 in March 2021. It then recovers to around \$3,000 by June 2021, followed by a period of volatility with a significant peak in late 2021 and a subsequent decline in early 2022. The price ends around \$3,800 in October 2023.

The chart displays the monthly change in the labor force. The y-axis represents the change in the number of people, ranging from -1,000,000 to 1,000,000. The x-axis shows dates from April 28, 2020, to October 14, 2023. The data is presented as a line with markers, where blue bars indicate positive changes and red bars indicate negative changes. The chart shows a significant initial drop in early 2020, followed by a strong recovery in 2021, a period of relative stability in 2022, and a slight decline in early 2023 before a recovery in late 2023.

The chart displays the monthly change in the number of people in the labor force from 2014 to 2026. The Y-axis represents the change in thousands, ranging from -10 to 10. The X-axis shows dates from 28.10.2013 to 14.10.2026. The data is presented as a line with markers, showing a general upward trend with significant fluctuations. Notable features include a sharp increase starting around 2017, a peak around 2021, followed by a decline and then a recovery.

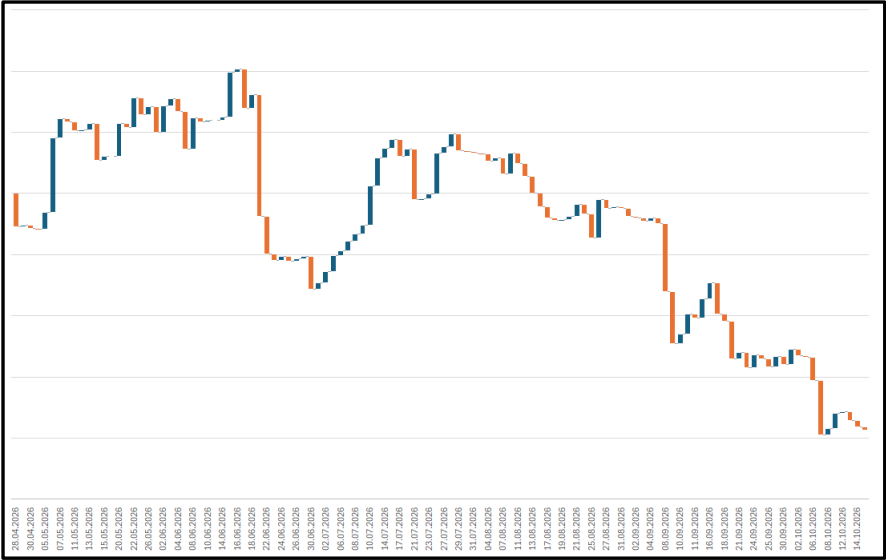

The chart displays the daily number of COVID-19 cases in the Netherlands from March 2020 to January 2021. The y-axis represents the number of cases, ranging from 0 to 10,000. The x-axis shows dates from 28.03.2020 to 14.01.2021. Two data series are plotted: a blue line and an orange line. The blue line shows a sharp increase starting in late March, peaking at approximately 10,000 cases in late May/early June, followed by a decline and then a second, smaller peak in late September/early October. The orange line follows a similar trend but is generally lower than the blue line, especially during the first peak. Both lines show a significant drop in cases starting in late December 2020, reaching near-zero levels by early January 2021.

The chart displays the monthly evolution of the number of deaths in the Canary Islands from January 2020 to January 2021. The Y-axis represents the number of deaths, ranging from 0 to 100. The X-axis represents the time period, with labels for every 15 days from 28.04.2020 to 14.10.2020. The data is presented as a line graph with markers for each day. The number of deaths starts at approximately 10 in early April 2020, drops to around 5 in mid-April, and then begins a steady climb. It reaches a peak of about 85 in early May 2020, followed by a sharp decline to around 10 in mid-May. The number of deaths then rises again, reaching a second peak of about 85 in early June 2020, before declining to around 10 in mid-June. The number of deaths then rises again, reaching a third peak of about 85 in early July 2020, before declining to around 10 in mid-July. The number of deaths then rises again, reaching a fourth peak of about 85 in early August 2020, before declining to around 10 in mid-August. The number of deaths then rises again, reaching a fifth peak of about 85 in early September 2020, before declining to around 10 in mid-September. The number of deaths then rises again, reaching a sixth peak of about 85 in early October 2020, before declining to around 10 in mid-October. The number of deaths then rises again, reaching a seventh peak of about 85 in early November 2020, before declining to around 10 in mid-November. The number of deaths then rises again, reaching an eighth peak of about 85 in early December 2020, before declining to around 10 in mid-December. The number of deaths then rises again, reaching a ninth peak of about 85 in early January 2021, before declining to around 10 in mid-January.

The chart displays the daily evolution of COVID-19 cases in the Val de Saône region. The blue line represents new cases, showing significant daily fluctuations, including several peaks and troughs. The orange line represents the cumulative total of cases, which rises steeply from late March, reaching approximately 800 cases by late May. After this initial surge, the cumulative count remains relatively stable, with minor adjustments, until late October. Following this period, the cumulative total shows a slight downward trend, followed by a very gradual increase towards the end of the observed period in January 2021.
